## Ventilation system and its types

Clean and fresh air is the basis of healthy lifestyle. Desirable that it surrounds a person not only on the street in the city of Fairmont, but also at home or at work. With this task the ventilation system will help to cope. For subdivision of ventilation systems into more high types are several parameters. The cost of installation of ventilation system, the type of ventilation and the type of operation. It can be of supply, exhaust and combined type. In the first case, the ventilation system provides an influx of fresh and purified air from the street, which pushes polluted from the room through door and window openings. The principle of operation of the exhaust system is understandable to many on the example of kitchen hoods, without which no apartment in Fairmont can do today, and even more so in the modern world. Combined type of ventilation system is the most popular. With her fresh polluted air is removed from the room, passing through two degrees of purification. However, this most high quality variant of ventilation is combined, which combines the supply and exhaust systems. Thanks to it, the processes of outflow of polluted and inflow of fresh air are combined.

_355
Supply and exhaust ventilation system in the city of Fairmont capable guarantee ideal circulation of air masses in any room. Depending on what territory the ventilation system creates, it is possible to define local and general exchange of its operation. Local used then when there is an opportunity eliminate polluted air directly at the place of its origin. For example, ventilation system applied both at home and at work. Supply and exhaust system with recuperator. In the case when eliminate dirty air and supply fresh air, necessarily, for natural reasons, more will set in Fairmont is a general exchange ventilation system that will cope with cleaning of the entire room. The structure of components of ventilation systems also subdivides them into two types: sprawling and monoblock. The sprawling ventilation system is a system in which all units are installed remotely from each other. In the second all structural elements are placed in one housing. The monoblock system has weighty advantage, since equipped with equipment that isolates appearing during operation of devices, noise.
